SUMMARY

Computer Science student with a strong passion for Web Application Penetration Testing and Offensive Security. Experienced in identifying and exploiting common web application vulnerabilities through hands-on practice using TryHackMe, Hack The Box, and PortSwigger Web Security Academy. Skilled in vulnerability assessment, HTTP request analysis, and security testing using industry-standard tools. Continuously developing practical penetration testing skills through personal projects, CTF challenges, and a dedicated home lab.

EDUCATION

Bachelor of Computer Science

Faculty of Computers and Artificial Intelligence – Fayoum University – (2023 – 2027)

Grade: B+

EXPERIENCE

Cybersecurity & Penetration Testing Trainee — DEPI

Egypt | 2025 – Present

- Participating in practical cybersecurity training focused on penetration testing and security assessment.
- Applying networking, Linux, and web security concepts through hands-on exercises and security labs.
- Practicing web application vulnerability assessment and HTTP traffic analysis using industry-standard security tools.
- Developing practical skills in reconnaissance, enumeration, vulnerability identification, and basic exploitation.
- Working on security challenges and practical scenarios to strengthen penetration testing and problem-solving skills.

PROJECTS

Web Application Penetration Test

Burp Suite | Nmap | Gobuster | OWASP

- Performed a security assessment of an intentionally vulnerable web application.
- Conducted reconnaissance, enumeration, and HTTP request analysis during the assessment.
- Identified and validated SQL Injection, Cross-Site Scripting (XSS), IDOR, and authentication vulnerabilities.
- Analyzed application behavior and documented security findings with remediation recommendations based on OWASP guidelines.

Personal Penetration Testing Home Lab

Kali Linux | VMware / VirtualBox | Nmap | Wireshark

- Built a virtual penetration testing environment using VMware/VirtualBox for hands-on security practice.
- Configured isolated virtual machines to simulate realistic penetration testing scenarios.
- Practiced network reconnaissance, service enumeration, vulnerability assessment, and exploitation techniques.
- Used the lab to strengthen Linux, networking, and web application security skills in a controlled environment.

Web Security & CTF Practice

TryHackMe | Hack the Box | PortSwigger Web Security Academy

- Solved practical security challenges covering web application security, Linux, networking, and penetration testing.
- Applied reconnaissance, enumeration, authentication testing, and HTTP request manipulation techniques.
- Practiced identifying and exploiting common web application vulnerabilities in controlled environments.
- Ranked among the **Top 2% on TryHackMe** through continuous hands-on security practice.

TECHNICAL SKILLS

Web Security: Web Application Penetration Testing, OWASP Top 10, SQL Injection, Cross-Site Scripting (XSS), IDOR, Authentication, Authorization, HTTP/HTTPS

Networking: TCP/IP, DNS, HTTP/HTTPS, Network Enumeration

Tools: Burp Suite | Nmap | Gobuster | Wireshark | Metasploit | John the Ripper | Hashcat | Hydra

Programming & Scripting: Python, Bash, SQL

Systems: Linux, Kali Linux, Windows, Virtualization

Security: Vulnerability Assessment, Reconnaissance, Enumeration, Basic Exploit Development

SOFT SKILLS

Analytical Thinking | Problem Solving | Attention to Detail | Technical Communication | Technical Report Writing | Teamwork | Continuous Learning

LANGUAGES

English — B1
